## EXECUTIVE SUMMARY

The Four Seasons Hotel Toronto retained GFL Environmental Inc. to conduct a solid, non-hazardous waste audit for the hotel located at 60 Yorkville Avenue in Toronto, Ontario. A collective waste audit was performed on December 13, 2022.

### PURPOSE

The purpose of the waste audit was to identify, quantify and analyze the composition of the waste stream and to ensure compliance with the requirements outlined in the Ministry of the Environment Ontario (MOE) Regulations 102/94 and 103/94.

### AUDIT METHODOLOGY

To collect an appropriate sample of waste for the audit, staff were asked to save waste and recycling produced from the previous day, an approximate 24-hour period. The GFL Environmental Inc. team then received the waste sample and conducted the audit and analysis of the stream at an off-site location. An overall survey was completed by the GFL Environmental Inc. audit team; bags of waste material were opened and separated into commodity type (paper, plastic, metal, glass, organic and 'other') and the resulting subcategories (as listed in Appendix I, page 15). Each commodity type and subcategory were weighed individually.

### WASTE AUDIT RESULTS

The information contained in this waste audit report was gathered from the off-site collective waste audit, discussions with Four Seasons Hotel personnel, and an analysis of the current waste management handling practices used on-site at the facility. The figure below displays the total projected annual waste categories as represented from the materials analyzed during the audit.

#### Audited Waste Category Breakdown (kg/ year)

Figure 1 Audited Waste Category Breakdown

## Total Materials Recycled and/or Sent to Landfill

| Material Destination   | Annual Total      |                   |               |
|------------------------|-------------------|-------------------|---------------|
|                        | Kilograms (kg)    | Metric Tonnes (t) | Percent (%)   |
| Landfill Waste         | 116,351.23        | 116.35            | 14.04         |
| Recycled               | 712,200.00        | 712.20            | 85.96         |
| <b>Total Generated</b> | <b>828,551.23</b> | <b>828.55</b>     | <b>100.00</b> |

## DIVERSION RATE

The 2022 waste diversion rate for the Four Seasons Hotel Toronto is **85.96%**, as shown calculated on page 8 of this report.

## RECOMMENDATIONS

Based on the waste audit findings, the top areas of focus should be on initiatives driven towards:

- **Improving signage:** Implementing clear and consistent signage will allow for a better understanding of and participation in the program.
- **Improve organics program:** Organics are the heaviest contributor to landfill waste weight. By diverting more organic waste from landfill, Four Seasons Hotel could potentially divert an additional 75,154.10 kg from landfill.
- **Training and education:** Educating employees on a semi-annual basis will help improve and continue the success of the program.

## POTENTIAL DIVERSION RATE

If the above recommendations are implemented, the potential diversion rate of the Four Seasons Hotel Toronto could be **97.84%**, as shown calculated on page 10 of this report.

## STATEMENT OF LIMITATIONS

- The waste audit conducted at Four Seasons Hotel on December 13, 2022 reflects all materials observed at the time of the audit for the 24-hour sample period;
- Waste audit methodology is based on industry standards as well as the waste auditing team's expertise in waste management. The majority of GFL Environmental Inc.'s waste auditors are 3R Certified through the Recycling Council of Ontario;
- Data is annualized in accordance with the Ministry of the Environment's reporting requirements. GFL Environmental Inc. cannot guarantee day-to-day generation produces the same quantities of materials;
- Analysis and recommendations are based on our observations, knowledge, judgement, industry best practices and consultations with the client; and
- Overall report and methodology have been designed to meet project objectives/deliverables.

## ANOMALIES

Anomalies are physical items or operational challenges (e.g. work events such as barbecues, scheduled special events, etc.) that would alter the composition of the waste stream as a one off occurrence. No anomalies were found in the waste audit sample.

# 1 INTRODUCTION

The Four Seasons Hotel Toronto retained GFL Environmental Inc. to conduct a solid, non-hazardous waste audit for the hotel located at 60 Yorkville Avenue in Toronto, Ontario. A collective waste audit was performed on December 13, 2022.

The overall purpose of the waste audit is to identify, quantify and analyze the composition of the landfill waste stream to ensure compliance with the requirements outlined in the Ministry of the Environment Ontario (MOE) Regulations 102/94 and 103/94. Under O.Reg. 102/94, all waste audits must address:

- The amount, nature and composition of the waste generated in designated functional areas of the entity;
- How the waste is produced, including relevant management decisions and policies;
- How the waste is managed; and
- The extent to which materials or products used or sold consist of recycled or reused materials or products.

Waste audits are also used to determine:

- The ability to reduce, reuse and recycle materials from the existing waste stream;
- Identify the overall diversion rates for all recyclable materials;
- Identify further opportunities for greater diversion, and;
- Pinpoint new recycling opportunities, and to enhance and strengthen the existing recycling initiatives currently in place.

This analysis aids the formation of a Waste Reduction Work Plan; a plan to go forward with a successful diversion program, drawing from the audit results and the subsequent diversion recommendations made by GFL Environmental Inc., in partnership with input and insight from the Four Seasons Hotel Toronto.

## 2 AUDITEE PROFILE AND PROJECT SCOPE

The following section provides contextual information regarding the Four Seasons Hotel Toronto and the waste audit that was completed for the facility on December 13, 2022.

The Four Seasons Hotel and Residences Toronto is a complex consisting of a 204-metre, 55-storey residential condominium tower and a 125-metre, 30-storey hotel tower, located in the Yorkville neighbourhood of Toronto, Ontario, Canada, which opened on October 5, 2012. Located at 60 Yorkville Avenue, at its intersection with Bay Street, the complex is situated one block east of the former Four Seasons Hotel Toronto building at 21 Avenue Road. For the purpose of this waste audit study, the waste generated from the residence side of the property was not included in the analysis, as it is not required under MOE Regulation 102/94, 103/94.

### 2.2 CURRENT WASTE MANAGEMENT PROGRAM

The Four Seasons Hotel Toronto currently has programs in place for waste, cardboard, mixed recycling and organics. The table below describes the containers used on site and the service schedule for each material stream.

| Material Stream   | Container                               | Service Schedule        |
|-------------------|-----------------------------------------|-------------------------|
| Waste & Cardboard | 1 x 35 cubic yard dual stream compactor | Serviced twice per week |
| Mixed Recycling   | 21 x 95 gallon totes                    | Serviced On Call        |
| Organics          | 60 x 32 gallon totes                    | Serviced daily          |

## 3 WASTE AUDIT METHODOLOGY

### 3.1 WASTE AUDIT PROCEDURE

To collect an appropriate sample of waste for the audit, staff were asked to save waste and recycling produced from the previous day, an approximate 24-hour period. The GFL Environmental Inc. team then received the waste sample and conducted the audit and analysis of the stream at an off-site location. An overall survey was completed by the GFL Environmental Inc. audit team; bags of waste material were opened and separated into commodity type (paper, plastic, metal, glass, organic and 'other') and the resulting subcategories (as listed in Appendix I, page 15). Each commodity type and subcategory were weighed individually.

### 3.2 AUDITOR PROFILE

Laura McAlpine and Christy Jamieson were the lead auditors who conducted the audit organization, preparation and supervision; Laura and Christy are both 3R Certified auditors through the Recycling Council of Ontario (RCO). The lead auditors were assisted by Jaylynn Stone during the waste audit for the Four Seasons Hotel.

### 3.3 COMMODITIES SORTED

The following is a list of commodity categories. The major categories of commodities sorted are paper, plastic, metal, glass, household special waste, organics, and 'other' materials. Within these major categories are subcategories, and these help to further sort the commodities.

| <b>Paper</b>               |                                                                                                           |
|----------------------------|-----------------------------------------------------------------------------------------------------------|
| Newspaper                  | Non-glossy; colour flyers, daily papers                                                                   |
| Magazines                  | Glossy; magazines and catalogues                                                                          |
| Cardboard                  | Corrugated cardboard boxes and tubes                                                                      |
| Boxboard                   | Thin paper board boxes (cereal, crackers, tissue, etc.)                                                   |
| Mixed paper                | Printer paper, envelopes                                                                                  |
| Molded pulp                | Egg cartons, take-out beverage trays                                                                      |
| Other paper                | Cold beverage cups, layered paper envelopes, waxed papers, etc.                                           |
| Coffee cups                | Take-out, non-styrofoam paper coffee cups                                                                 |
| Spiral Wound Containers    | Pringles cans, concentrated juice cans, etc.                                                              |
| Gable Top Containers       | Milk and juice cartons                                                                                    |
| Aseptic (Tetra) Containers | Juice boxes, wine cartons, etc.                                                                           |
| <b>Plastic</b>             |                                                                                                           |
| #1 PET                     | Single-use water, juice and pop bottles; clear clamshells, take-out packaging, food packaging and bottles |
| #2 HDPE                    | Bottles and jugs, buckets, tubs, bags, etc.                                                               |
| #3 PVC                     | Clamshell packaging                                                                                       |
| #4 LDPE                    | Bags, bottles, tubs and containers                                                                        |
| #5 PP                      | Cups and take-out packaging, jugs and tubs                                                                |

|                                      |                                                                                                                                                    |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| #6 Styrofoam                         | Take out styrofoam containers                                                                                                                      |
| #6 Styrofoam (Packaging)             | Styrofoam peanuts, block packaging                                                                                                                 |
| #6 Rigid                             | Coffee cup lids, cups, clamshells, take-out food packaging, etc.                                                                                   |
| #7 Other                             | Durable containers, packaging                                                                                                                      |
| Rigid Plastic                        | Pens, tooth brushes, gift gards, straws, cutlery, etc.                                                                                             |
| Plastic Strapping                    | Plastic binding for newspapers, packages, etc.                                                                                                     |
| <b>Metal</b>                         |                                                                                                                                                    |
| Aluminum cans                        | Pop and juice cans                                                                                                                                 |
| Aluminum foil                        | Foil wrap                                                                                                                                          |
| Aluminum trays                       | Catering trays, pie plates, etc.                                                                                                                   |
| Aerosal cans                         | Hair spray, paint, compressed air, etc.                                                                                                            |
| Steel cans                           | Large soup cans                                                                                                                                    |
| Scrap metal                          | Wire hangers, nuts and bolts, metal cookie tins, metal strapping                                                                                   |
| <b>Glass</b>                         |                                                                                                                                                    |
| Clear/ Coloured                      | Clear and coloured glass food and beverage packaging                                                                                               |
| Liquor Bottles                       | Refundable containers                                                                                                                              |
| Other glass                          | Ceramics, cups, plates, mirrors, window glass, non-LED or fluorescent lightbulbs                                                                   |
| <b>Household Special Waste (HSW)</b> |                                                                                                                                                    |
| Batteries                            | All types                                                                                                                                          |
| Toner cartridges                     | Printer toner cartridges                                                                                                                           |
| Chemicals/ Liquids                   | Paints, solvents, oils, etc.; cosmetics, lotions, healthcare products, etc.                                                                        |
| E-Waste                              | Electronics, small appliances, phones, computer equipment, cables, etc.                                                                            |
| Lightbulbs                           | Fluorescent tubes, LED                                                                                                                             |
| <b>Organics</b>                      |                                                                                                                                                    |
| Food waste                           | All food scraps, peels, bones, skin, pits, coffee grounds and filters, tea bags                                                                    |
| Tissue/ Toweling                     | Facial tissue, napkins, paper towel                                                                                                                |
| Beverage liquids                     | Water, coffee, pop, juice, soup, etc.                                                                                                              |
| Compostable Ware                     | Compostable packaging, coffee cups, cutlery; wooden stir sticks, bamboo serveware, wooden chopsticks, etc.                                         |
| Plants and Flowers                   | Flowers, potted plants, dead leaves                                                                                                                |
| <b>Other Materials</b>               |                                                                                                                                                    |
| Other                                | Many different other materials are found in audit samples. Additional notes and subcategories are to be recorded on the waste audit sorting sheet. |

*Note: Commodities sorted consists of materials found in the audit. However, additional materials known to be generated at the facility may not have been in the audit sample. The additional materials have been included in the audit results as part of the diversion program in place.*

### 3.4 METHOD OF ANNUALIZATION

The Mass Ratio Method was used when calculating the mass of materials generated for the entire year at the Four Seasons Hotel Toronto. This is the more useful and preferred method when annual waste and recycling records are deemed accurate and verifiable. The Mass Ratio Method formula is as follows:

$$m = \left( \frac{T_s}{T_c} \right) (T_t) + T_r$$

**m** = total annual mass of each material. Note that this should be calculated for each category of waste and for each method of disposition (reuse, recycling and disposal.)

**Ts** = total material generated in a specific category found in the audit sample.

**Tc** = total mass of all materials found in the audit sample with a specific method of disposition (reuse or recycling or disposal.) For materials analyzed during the audit, there will likely be a different value of Tc for all materials sent for disposal, for all materials sent for reuse, and for all materials sent for recycling during the sampling period.

**Tt** = total annual mass of material, substantiated by records, per container. For example, a site may have records for each haul of a 40-yard bin of waste. Therefore, Tt for this container would be the sum of the mass of all hauls that year for that container.

**Tr** = annual mass per category of materials of items not found in the audit sample for which there are records or reasonable estimates. These would be materials that would not have been found in the audit sample but are a regularly generated waste stream, such as furniture or wood pallets offered for external reuse. This is quantified and substantiated by records kept by the auditee. These materials should be accounted for in the final calculation.

## 4 WASTE AUDIT RESULTS

Based on the waste audit sample, the total amount of waste generated and disposed of in the waste stream at the Four Seasons Hotel Toronto is estimated to be 318.77 kilograms (kg) during a 24-hour period or 116,351.23 kg annually.

From the audited waste sample, organic materials represent 64.59%; plastic materials represent 10.93%; paper materials represent 7.56%; glass materials represent 5.89%; metal materials represent 5.63%, and 'other' materials represent 5.40% of the total annual waste disposed and sent to landfill.

### Total Annual Waste Generated 2022

| COMMODITY CATEGORY | KILOGRAM (kg)     | PERCENTAGE (%) |
|--------------------|-------------------|----------------|
| Organics           | 75,154.10         | 64.59          |
| Plastic            | 12,715.16         | 10.93          |
| Paper              | 8,795.90          | 7.56           |
| Glass              | 6,851.23          | 5.89           |
| Metal              | 6,552.05          | 5.63           |
| 'Other'            | 6,282.79          | 5.40           |
| <b>TOTAL</b>       | <b>116,351.23</b> | <b>100.00</b>  |

### Total Annual Waste Composition 2022

Figure 2 Total Annual Waste Composition 2022

*\*Figures are based on 24-hour waste audit sample. Annual projection is based on number of operational days.*

## 5 CONTAMINATION OF AUDIT SAMPLE

Based on the waste audit results, 98,460.25 kg (84.62%) of the landfill waste sample was contaminated with recyclable materials. Of that total, 75,154.10 kg (75.15 t) was recyclable organic materials; 6,761.48 kg (6.76 t) was recyclable paper materials; 3,231.15 kg (3.23 t) was recyclable plastic materials; 6,312.70 kg (6.31 t) was recyclable metal materials, and 6,130.28 kg (6.13 t) was recyclable glass materials.

Figure 3 Contamination of Waste Audit Sample

## 6 DIVERSION RATE

A **diversion rate** is the percentage of total materials that are diverted from landfill. The annual diversion rate is calculated as follows:

**Total Generated materials is calculated as follows:**

Total Generated = Landfill Waste + Recycling

116,351.23 kg + 712,200.00 kg = 828,551.23 kg

**Diversion Rate is calculated as follows:**

Diversion Rate =  $\frac{\text{(amount diverted from the facility)}}{\text{(total amount of material generated)}} \times 100\%$

$= \frac{712,200.00 \text{ kg}}{828,551.23 \text{ kg}}$

$= 0.8596 \times 100\%$

**= 85.96%**

Based on industry standards, service information and available monthly data reporting 712,200.00 kg of materials are removed and recycled at the Four Seasons Hotel Toronto on an annual basis.

| MATERIAL DESTINATION   | WEIGHT GENERATION (kg) | WEIGHT GENERATED (t) | Percentages (%) |
|------------------------|------------------------|----------------------|-----------------|
| Landfill Waste         | 116,351.23             | 116.35               | 14.04           |
| Recycled               | 712,200.00             | 712.20               | 85.96           |
| <b>TOTAL GENERATED</b> | <b>828,551.23</b>      | <b>828.55</b>        | <b>100.00</b>   |

*\*Total recycling includes unaudited organics and other diverted materials.*

Therefore, the current annual diversion rate percentage when all initiatives are accounted for is **85.96%**.

### Annual Diversion Rate Percentage 2022

Figure 4 Annual Diversion Rate Percentage 2022

## 7 CAPTURE RATE

The **capture rate (c)** indicates the proportion of divertable waste, expressed as a percentage, which is successfully diverted for disposal. This figure includes all generated divertable waste, from all streams (recycling and waste).

**Total Divertable Materials is calculated as follows:**

Total Divertable Materials Generated = Total Recycling Generated + Total Divertable Materials Found in Waste Stream

- Total recycling generated: 712,200.00 kg
- Divertable materials found in waste stream: 98,460.25 kg
- Total divertable material generated: 712,200.00 kg + 98,460.25 kg = 810,660.25 kg

**Capture Rate is calculated as follows:**

$$\text{Capture Rate} = \frac{(\text{total recycling generated})}{(\text{total divertable materials generated})}$$

$$c = \frac{712,200.00 \text{ kg}}{810,660.25 \text{ kg}}$$

$$c = 0.8785 \times 100\%$$

$$c = 87.85\%$$

Therefore, the capture rate for the Four Seasons Hotel Toronto is **87.85%**.

### Annual Capture Rate Percentage 2022

Figure 5 Annual Capture Rate Percentage 2022

## 8 POTENTIAL DIVERSION

The **potential current diversion rate (P)** is the percentage of total materials that could be diverted from landfill if all divertable materials were placed in the proper recycling stream. The potential current diversion rate is calculated as follows:

**Total Divertable Materials is calculated as follows:**

Total Divertable Materials Generated = Total Recycling Generated + Total Divertable Materials Found in Waste Stream

- Total recycling generated: 712,200.00 kg
- Divertable materials found in landfill waste stream: 98,460.25 kg
- Total divertable material generated: 712,200.00 kg + 98,460.25 kg = 810,660.25 kg

**Potential Diversion Rate is calculated as follows:**

Potential Current Diversion Rate =  $\frac{\text{(total divertable materials generated)}}{\text{(total materials generated)}}$

$$p = \frac{810,660.25 \text{ kg}}{828,551.23 \text{ kg}}$$

$$p = 0.9784 \times 100\%$$

$$p = 97.84\%$$

Therefore, the potential current diversion rate for the Four Seasons Hotel Toronto is **97.84%**.

Figure 6 Annual Potential Diversion Rate Percentage 2022

## 9 RECOMMENDATIONS

Based on the waste audit results, it is important to consider the main areas of improvement to focus on, and pinpoint where improvements can be made. Tackling one initiative at a time will increase the chances of success. Whether changes need to be made to the existing program itself or increasing education and awareness, narrowing down your options and targeting a specific issue every quarter or semi-annually, these options will help attain meaningful results.

In order to improve the effectiveness of the recycling program at the Four Seasons Hotel Toronto, there are several initiatives to take into consideration. To divert as much material from landfill as possible it would be beneficial for the facility to direct all recycling efforts towards further source separating recyclable materials.

### 9.1 IMPROVE ORGANICS RECYCLING

A total of 64.59% of the landfill waste sample was organic waste material. As organic materials are the heaviest contributor to overall disposal figures, diverting as much organic material from the waste stream as possible will greatly increase the diversion rate and reduce the amount of waste sent to landfill annually. The majority of this waste appeared to be generated from the restaurant. Restaurant staff should receive specific training on how best to recycle organic material, and organic totes should be made accessible to them. By diverting organic waste, the Four Seasons Hotel Toronto could divert an additional 75,154.10 kg of material from landfill annually.

### 9.2 IMPROVE POINT-OF-GENERATION RECYCLING

It is recommended that internal waste assessments be conducted throughout the facility on a regular, unscheduled basis. Staff should not be aware of when these assessments are being done, to ensure accuracy of results. The goal is to determine which area(s) need improvements. Proper signage, recycling bins and education will help source separate these items and capture more recyclable materials.

### 9.3 IMPLEMENT FOOD DIVERSION PROGRAMS

A Large amount of edible food waste was found in the organics sample. To further assist in diverting as much food waste as possible, it is recommended that the Four Seasons Hotel Toronto implements a program to collect uneaten meals to donate to Second Harvest. Second Harvest is Canada's largest food rescue charity that provides donated food to those at food banks, seniors centers, school programs, etc. This program could significantly reduce the amount of organic waste going into the landfill and organics streams, while at the same time provide meals for those in need.

## 9.4 SIGNAGE AND EDUCATION

### ***Employee and Guest Education***

Educational information should be displayed on an 'Environmental Board' and frequently updated to encourage and engage employee and guest participation. Posting information in the area near the recycling and waste receptacles and/or in common areas will show management initiative and help to engage employees. While education and training on waste reduction should be ongoing, formal education should take place sporadically (for example, 1-2 times per year).

### ***Visitor Education***

Clear, visible guidelines and signage are very important to the success of the recycling program. All areas of the facility should be equipped with appropriate signage to clearly indicate to visitors which materials are accepted in specific receptacles and to remind them of the importance of their involvement in the recycling program. Recycling guidelines should be posted wherever receptacles and collection containers are stationed (an example is shown below).

## 9.5 MONITORING AND EVALUATION

One of the fundamentals for a successful recycling program is gathering quantifiable results to follow the progress of the program over the course of time. Ensure that a waste audit is completed once every twelve (12) months and keep track of the data results year to year, in order to compare disposal and recycling rates. Receive monthly diversion reports and display or send out results in a newsletter to reach all employees to pinpoint where improvements can be made by individuals and the facility.

It is suggested that landfill waste and recycling disposal areas be monitored so the number of receptacles and pick-up schedule can be adjusted as necessary. Maintain up-to-date records of waste diversion initiatives (e.g. diversion charts, educational or promotional efforts etc.) to see if changes need to be made to the existing recycling program.

## 9.6 CONTINUAL PROGRAM REVIEW

The success of the existing recycling program should be continually reviewed by facility management in order to establish goals and monitor the improvement over time. This should include but not be limited to:

- The adequacy and accessibility of available bins;
- The disposal methods used by employees and guests of the building, and the location of signage or labels on bins, and;
- The assessment of how materials are being sorted and the potential for new materials to be recycled as the hauler systems and industry changes.

As always, please post and make available the MOE work plan for all employees and guests, and sign documents in all applicable areas (as located on pages 24 and 38 of this report).

## 10 CONCLUSION

Based on the waste audit figures, the Four Seasons Hotel Toronto generates 828,551.23 kg (828.55 t) of material annually, 712,200.00 kg (712.20 t) of which is diverted as recycling and 116,351.23 kg (116.35 t) of which is disposed of as landfill waste. 98,460.25 kg (84.62%) of the total landfill waste could have been diverted to available recycling programs on site.

In order to address and monitor the effectiveness of the recycling program at the Four Seasons Hotel Toronto, consider the following suggestions to improve the existing program and efforts of employees and visitors:

- Provide recycling receptacles wherever garbage bins exist so that there are no excuses for not participating in the recycling program;
- Ensure that adequate signage is placed on or above all recycling receptacles and that the signage remains consistent throughout the building;
- Education throughout the facilities can be promoted through promotional and awareness events (especially during Earth Month in April and Waste Reduction Week in October), and;
- Provide employees and guests with information on recycling procedures and services (for example inform employees upon hiring and have information when visitors enter the building).

The success of these initiatives depends on the involvement of all parties, from management to employees. The more involved all parties are in the waste reduction goals of the Four Seasons Hotel Toronto, the greater the success of the program.

Note: O. Reg. 102/94 does not apply to multi-unit residential buildings.

#### II. DESCRIPTION OF ENTITY

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Provide a brief overview of the entity(ties):</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| The Four Seasons Hotel and Residences Toronto is a complex consisting of a 204-metre, 55-storey residential condominium tower and a 125-metre, 30-storey hotel tower, located in the Yorkville neighbourhood of Toronto, Ontario, Canada, which opened on October 5, 2012. Located at 60 Yorkville Avenue, at its intersection with Bay Street, the complex is situated one block east of the former Four Seasons Hotel Toronto building at 21 Avenue Road. For the purpose of this waste audit study, the waste generated from the residence side of the property was not included in the analysis, as it is not required under MOE Regulation 102/94, 103/94. |

### III. HOW WASTE IS PRODUCED AND DECISIONS AFFECTING THE PRODUCTION OF WASTE

| Categories of Waste                              | How Is the Waste Produced and What Management Decisions/Policies Affect Its Production?   |
|--------------------------------------------------|-------------------------------------------------------------------------------------------|
| Newspaper                                        | Generated by participants. Material is deposited into designated container for recycling. |
| Magazines                                        | Generated by participants. Material is deposited into designated container for recycling. |
| Cardboard                                        | Generated by participants. Material is deposited into designated container for recycling. |
| Boxboard                                         | Generated by participants. Material is deposited into designated container for recycling. |
| Mixed paper                                      | Generated by participants. Material is deposited into designated container for recycling. |
| Molded Pulp                                      | Generated by participants. Material is deposited into designated container for recycling. |
| Kraft Paper                                      | Generated by participants. Material is deposited into designated container for recycling. |
| Other Paper                                      | Generated by participants. Material is deposited into designated container for waste.     |
| Spiral Wound                                     | Generated by participants. Material is deposited into designated container for waste.     |
| Coffee Cups                                      | Generated by participants. Material is deposited into designated container for recycling. |
| Aseptic Containers                               | Generated by participants. Material is deposited into designated container for recycling. |
| Gable Top Containers                             | Generated by participants. Material is deposited into designated container for recycling. |
| PETE #1 plastic beverage bottles and clam shells | Generated by participants. Material is deposited into designated container for recycling. |
| HDPE #2 plastics jugs, crates, totes and drums   | Generated by participants. Material is deposited into designated container for recycling. |
| PVC #3                                           | Generated by participants. Material is deposited into designated container for waste.     |
| LDPE #4 Recyclable Film                          | Generated by participants. Material is deposited into designated container for recycling. |
| PP #5                                            | Generated by participants. Material is deposited into designated container for recycling. |
| PS #6 (Styrofoam)                                | Generated by participants. Material is deposited into designated container for waste.     |
| PS #6 (Clear/Hard)                               | Generated by participants. Material is deposited into designated container for recycling. |
| Non-Recyclable Film                              | Generated by participants. Material is deposited into designated container for waste.     |
| Rigid Plastics                                   | Generated by participants. Material is deposited into designated container for waste.     |
| Plastic Strapping                                | Generated by participants. Material is deposited into designated container for waste.     |
| Aluminum Food /Beverage Cans                     | Generated by participants. Material is deposited into designated container for recycling. |
| Aluminum Foil                                    | Generated by participants. Material is deposited into designated container for waste.     |

|                                 |                                                                                                    |
|---------------------------------|----------------------------------------------------------------------------------------------------|
| Aluminum Trays                  | Generated by participants. Material is deposited into designated container for recycling.          |
| Aerosol Cans                    | Generated by participants. Material is deposited into designated container for waste.              |
| Steel Food /Beverage Cans       | Generated by participants. Material is deposited into designated container for recycling.          |
| Scrap Metal                     | Generated by participants. Material is deposited into designated container for recycling.          |
| Glass Food /Beverage Containers | Generated by participants. Material is deposited into designated container for recycling.          |
| Other Glass                     | Generated by participants. Material is deposited into designated container for waste.              |
| Food Waste                      | Generated by participants. Material is deposited into designated container for organics recycling. |
| Tissue/Toweling                 | Generated by participants. Material is deposited into designated container for organics recycling. |
| Beverage Liquids                | Generated by participants. Material is deposited into designated container for organics recycling. |
| Compostable Containers          | Generated by participants. Material is deposited into designated container for organics recycling. |
| Plant/ Yard Waste               | Generated by participants. Material is deposited into designated container for organics recycling. |
| Wood Skids                      | Generated by participants. Material is deposited into designated container for recycling.          |
| E-Waste/Toners                  | Generated by participants. Material is deposited into designated container for recycling.          |
| Refundable Bottles/Cans         | Generated by participants. Material is deposited into designated container for recycling.          |
| Soap                            | Generated by participants. Material is deposited into designated container for recycling.          |
| Recovered Recyclables           | Generated by participants. Material is deposited into designated container for recycling.          |
| Grease                          | Generated by participants. Material is deposited into designated container for recycling.          |
| Textiles                        | Generated by participants. Material is deposited into designated container for waste.              |
| Hangers                         | Generated by participants. Material is deposited into designated container for waste.              |

**VI. TO WHICH MATERIALS OR PRODUCTS USED OR SOLD BY ENTITY  
CONSIST OF RECYCLED OR REUSED MATERIALS OR PRODUCTS**

1. Do you have a management policy in place that promotes the purchasing and/or use of materials or products that consist of recycled and/or reused materials or products? If yes, please describe.

**Not at this time.**

2. Do you have plans to increase the extent to which materials or products used or sold\* consist of recycled or reused materials or products? If yes, please describe.

**Not at this time.**

\* Information regarding materials or products "sold" that consist of recycled or reused materials or products is only required from owner(s) of retail shopping establishments and the owner(s) or operator(s) of large manufacturing establishments.

Please attach any additional page(s) as required to answer the above questions

| Provide a brief overview of the entity(ties):                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p>The Four Seasons Hotel and Residences Toronto is a complex consisting of a 204-metre, 55-storey residential condominium tower and a 125-metre, 30-storey hotel tower, located in the Yorkville neighbourhood of Toronto, Ontario, Canada, which opened on October 5, 2012. Located at 60 Yorkville Avenue, at its intersection with Bay Street, the complex is situated one block east of the former Four Seasons Hotel Toronto building at 21 Avenue Road. For the purpose of this waste audit study, the waste generated from the residence side of the property was not included in the analysis, as it is not required under MOE Regulation 102/94, 103/94.</p> |

### III. PLANS TO REDUCE, REUSE AND RECYCLE

| Waste Category | Source Separation and 3Rs Program                                                                                                                                                                                                                                                                                                                                            |

#### **IV. RESPONSIBILITY FOR IMPLEMENTING THE WASTE REDUCTION WORK PLAN**

Identify who is responsible for implementing the Waste Reduction Work Plan at your entity (ies). If more than one person is responsible for implementation, identify each person who is responsible and indicate the part of the Waste Reduction Work Plan that each person is responsible for implementing.

| <b>Name of Person</b> | <b>Responsibility</b>                      | <b>Telephone #</b> |
|-----------------------|--------------------------------------------|--------------------|
| Jiri Samal            | Implementing the Waste Reduction Work plan | 416-928-7323       |

## V. TIMETABLE FOR IMPLEMENTING WASTE REDUCTION WORK PLAN

| Source Separation and 3Rs Program                | Schedule for Completion                                                                                                   |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| Newspaper                                        | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Magazines                                        | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Cardboard                                        | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Boxboard                                         | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Mixed paper                                      | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Molded Pulp                                      | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Kraft Paper                                      | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Other Paper                                      | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Spiral Wound                                     | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Coffee Cups                                      | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Aseptic Containers                               | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Gable Top Containers                             | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| PETE #1 plastic beverage bottles and clam shells | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| HDPE #2 plastics jugs, crates, totes and drums   | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| PVC #3                                           | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| LDPE #4 Recyclable Film                          | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| PP #5                                            | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| PS #6 (Clear/hard)                               | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| PS #6 (Styrofoam)                                | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Non-Recyclable Film                              | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Rigid Plastics                                   | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Plastic Strapping                                | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Aluminum Food /Beverage Cans                     | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |

|                                 |                                                                                                                           |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| Aluminum Foil                   | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Aluminum Trays                  | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Aerosol Cans                    | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Steel Food /Beverage Cans       | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Scrap Metal                     | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Glass Food /Beverage Containers | 3Rs Program is currently in place. The facility is continuously working on improving diversion and reduction initiatives. |
| Other Glass                     | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023.         |
| Food Waste                      | Organics program in place. The facility is continuously working on improving diversion and reduction initiatives.         |

| Shrink Wrap        | Material is not recyclable. Ensure participants understand what is accepted in the recycling program by mid-2023. |

## **VI. COMMUNICATION TO STAFF, CUSTOMERS, GUESTS AND VISITORS**

A copy of the Waste Reduction Work Plan will be posted in an area where most employees will see it and will be made available to employees upon request.

To ensure all participants in the recycling program understand where materials go, new receptacles and new signage will be applied to recycling and waste receptacles and to large collection bins in the loading dock.

**VII. ESTIMATED WASTE PRODUCED BY MATERIAL TYPE AND THE PROJECTED  
AMOUNT TO BE DIVERTED BY THE 3 Rs**

| Material Categories<br>(as stated in Part III) | Estimated Annual Waste Produced<br>(tonnes) | Name of Proposed 3Rs Program<br>(as stated in Part III) | Projections to Reduce, Reuse or Recycle Waste<br>(tonnes) |              |              | Estimated Annual Amount to be Diverted (%) |
|------------------------------------------------|---------------------------------------------|---------------------------------------------------------|-----------------------------------------------------------|--------------|--------------|--------------------------------------------|
|                                                |                                             |                                                         | Reduce                                                    | Reuse        | Recycle      |                                            |

## APPENDIX IV – QUESTIONS TO ASSESS COMPLIANCE

**PURPOSE:** TO OBTAIN INFORMATION THAT WILL SUPPORT AND ASSESSMENT OF A GENERATOR'S COMPLIANCE WITH ONTARIO REGULATION 103/94 SUB-SECTION 2(1) (D) THAT A SOURCE SEPARATION PROGRAM MUST INCLUDE "REASONABLE EFFORTS TO ENSURE THAT FULL USE IS MADE OF THE PROGRAM AND THAT THE SEPARATED WASTE IS REUSED OR RECYCLED."

Please answer the following questions **for each** waste management company that you have retained for the collection of the source separated material from your site?

1. Which waste management services company do you have a contract or agreement with to collect source separated materials from your site? (Please provide a copy of the contract/agreement for each waste management service company and if applicable, their Environmental Compliance Approval –ECA- or Environmental Activity and Sector Registry registration number)

**GFL Environmental Inc. is the contracted waste and recycling service provider. Please ask your sales representative for a copy of your invoice if you need it. GFL provides all solid, non-hazardous waste and recycling removal for the facility.**

2. a.)Where are the recyclable materials being sent to? (Please provide a letter including the name, location and ECA –if applicable of each receiving facility)

**Please see letter attached in Appendix VI.**

b.)If the waste is going to a waste transfer station, where are the recyclables being taken further? (Please provide a letter including the name, location and ECA –if applicable- of each final destination)

**Please refer to same letter attached in Appendix VI.**

c.)If the source separated material was sent for disposal (e.g., landfill, incineration, etc.) what explanation was provided to you by your waste management services company on the amount of source separated material that was sent for disposal?

**No source separated materials are sent to landfill.**

3. Please describe any additional efforts made to demonstrate compliance with s. 2(1) (d) of Reg. 103/94 (i.e. that reasonable efforts are made to ensure that the separated waste is reused or recycled). Please provide any documents that outline your efforts.

**No, not at this time.**

## APPENDIX V - Glossary of Terms

|                                            |                                                                                                                                                                                                                                                    |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Boxboard</b>                            | Thick cardstock-like paper used for a variety of consumer product packaging applications.                                                                                                                                                          |
| <b>Capture Rate</b>                        | The proportion of divertable waste, expressed as a percentage, which is successfully diverted from disposal.                                                                                                                                       |
| <b>Cardboard</b>                           | Corrugated containerboard.                                                                                                                                                                                                                         |
| <b>Collective Waste Audit</b>              | Collective annualized waste audit of waste generated as a whole; no breakdown of separate areas in the building.                                                                                                                                   |
| <b>Commodity</b>                           | A raw material product that could be bought or sold, such as metal, cardboard and plastic.                                                                                                                                                         |
| <b>Contamination</b>                       | Refers to the presence of recyclables in the garbage stream or, conversely, residual waste materials in a recycling stream.                                                                                                                        |
| <b>Diversion</b>                           | The act of diverting waste materials from landfill through reuse off-site or recycling. As well as actions to prevent waste materials from being generated, actions to reduce material generation, reuse (internal or external) source-separation. |
| <b>Diversion Rate</b>                      | The proportion by mass of all waste diverted from disposal to the total mass of all waste material generated, expressed as a percentage.                                                                                                           |
| <b>Divertable</b>                          | Capability of a material being recycled or reused.                                                                                                                                                                                                 |
| <b>Final Destination</b>                   | The location where materials are sent for disposal by the hauler. This can include a sorting facility                                                                                                                                              |
| <b>Mass Ration Method of Annualization</b> | A method of annualization of findings by applying the mass ratio of each material to the total mass of material generated that year.                                                                                                               |
| <b>Non-Divertable</b>                      | Material that is not able to be reused or recycled.                                                                                                                                                                                                |
| <b>Other Paper</b>                         | Non-recyclable paper products, glossy paper.                                                                                                                                                                                                       |
| <b>Plastic Resin Codes</b>                 | The numbers printed on some plastic products, surrounded by a triangle shape of arrows, to indicate                                                                                                                                                |

|                                           |                                                                                                                                                                                                        |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                           | the plastic resin they are made of. The numbers are 1, 2, 3, 4, 5, 6, and 7. They are used by waste haulers to identify what plastic type is recyclable.                                               |
| <b>Point of generation waste audit</b>    | An annualized audit of waste generated by separate areas of the building.                                                                                                                              |
| <b>Potential Diversion Rate</b>           | Is the percentage of total materials that could be diverted from landfill if all divertable materials were placed in the proper recycling stream.                                                      |
| <b>Recycling Council of Ontario (RCO)</b> | Is a not-for-profit membership based organization involved in policy, education and project work around the issues of consumption, waste generation, reduction and diversion, and recycling.           |
| <b>Residual Waste</b>                     | All material that cannot be diverted in any way with the current program, and thus must be disposed of via the garbage stream. This includes any materials that cannot be reused or recycled.          |
| <b>Source Separation Material</b>         | Separating materials by type at the point of discard so they can be recycled.                                                                                                                          |
| <b>Source separation program</b>          | A program to facilitate the source separation of waste for reuse or recycling.                                                                                                                         |
| <b>Waste</b>                              | Materials that are no longer wanted or needed and are disposed of either through landfill, reuse off-site, or recycling. Waste includes all garbage and recycling materials that is removed from site. |
| <b>Waste Generation Index</b>             | The waste generation index is the unit most closely related to the amount of solid waste generated by the facility such as production units or building population.                                    |
| <b>Waste per square foot</b>              | A measure of total waste used for comparing properties of varying sizes to each other. This measure can also be used to determine the success of waste reduction initiatives.                          |
| <b>Waste reduction work plan</b>          | From O.Reg. 102/94, a plan to reduce, reuse and recycle waste.                                                                                                                                         |

## **Waste Stream**

A waste, recycling or garbage stream refers to the flow of a group of materials from the generation on-site through to the final destination. For example, Paper stream, landfill stream, commingled stream.

## **APPENDIX VI – FINAL DESTINATION LETTER**

## LETTER OF DECLARATION

### Recyclable Material Diversion

GFL Environmental Inc. receives materials at their Greater Toronto Area (GTA) facilities and they are processed, diverted from landfills and recycled in the following manner:

**Fibre Materials including Corrugated Cardboard, Office Paper, and Newsprint Rolls**

– These materials are collected and sorted by type and shipped to Cascades and Canada Fibres for processing.

**Comingled Plastics, Metal, and Glass Recycling** – These materials are collected and sent to Canada Fibres or AAA Recycling for processing into new material.

**Wood** – Wood skids are reused in-house. Other wood waste is sent to St. Marys in Bowmanville to be used as a bio fuel.

**Organics** – Uncontaminated organics material is taken to Seaclyff Energy, located in Leamington, Ontario. Seaclyff Energy is an organics recycling and bioenergy facility. The material is diverted from landfill and recycled into renewable energy and organic fertilizer.

**Waste-** All materials disposed of as waste are taken to local transfer stations, and then trucked to a landfill. All wastes disposed of at GFL transfer stations are taken to The Ridge Landfill, owned by Waste Connections, in Blenheim, Ontario.

**Scrap Metal** – Ferrous and non-ferrous metals are collected and shipped to metal recyclers for reuse. They are typically brought to Don Mills Steel where the material is sorted into separate classes, such as aluminum, brass, copper, stainless steel, and any other residuals. The materials are then sent to a foundry, where they are melted into usable castings. Additionally, the material may also be taken to National Iron & Metal or AIM Recycling, where it is similarly sorted into separate classes and sent to be processed.

## **APPENDIX VII – CALIBRATION CERTIFICATE**

# Calibration Certificate

Date of Calibration: November 16, 2021

The Scales used for waste auditing by GFL Environmental Inc. has been checked and calibrated using known mass measures.

To ensure that the scales are performing accurately a 5 pound weight was used in the calibration procedure. The weight was placed on the scale to ensure an accurate reading of 5 pounds on the scale.

| Test Weight | Scale Reading | Model # of Scale | Serial # of Scale | Calibrated By (Print Name) | Date       |
|-------------|---------------|------------------|-------------------|----------------------------|------------|
| 5 lbs       | 5lbs          | H-5837           | 02010016008       | Blue Top Scale             | 11/16/2021 |
| 5 lbs       | 5 lbs         | H-5837           | 01804016006       | Stainless Steel Scale      | 11/16/2021 |

## **APPENDIX VIII – PHOTOGRAPHS**

Recyclable molded pulp found in waste.

Paper towel and tissue found in waste.

Aluminum cans found in waste.

Recyclable #5 plastics found in waste.

Food waste disposed of as landfill waste.

Mixed wastes.

Food and beverage glass found in waste.

Refundable containers and other glass bottles found in waste.
