

FOUR SEASONS RESORT MALDIVES AT KUDA HURAA
GREEN TEAM & ESG PROGRAM ACTION PLAN- 2023

1. Introduction

- ✓ The purpose of any 'green team' is to activate the organizations sustainability mission, raise awareness of sustainable practices and to facilitate education to help stimulate ideas and actions for system improvements with coordination of all department, FB, Room, H/K, Engineering,

2. Green Team Responsibilities,

- ✓ Overseeing the property's waste management and recycling plan, including efforts to eliminate single use plastic with the support of the Director of Engineering and Director of Finance
- ✓ Considering opportunities for providing the training for employees around all aspects of waste management recycling and plastic reduction.
- ✓ Once goals and timeline are determined, check progress against goals on quarterly basis
- ✓ Developing appropriate employees' guest and homeowner messaging to encourage effective waste management practices.
- ✓ Sharing waste and recycling plans with homeowner Associations where applicable to incorporate any changes as needed
- ✓ Ensure the DOE has the appropriate reports from waste vendor and appropriates manager in order to input data into HEP on monthly basis.

3. Green Team Members.

- ✓ Didier Jardin – General Manager
- ✓ Surender Pal – Director of Engineering
- ✓ Hassan Ziyad – Director of Room
- ✓ Mohmed Shan – FB Assistant Manager
- ✓ Ismail Rasheed – Purchase Assistant Manager
- ✓ Aalim – Engineering Coordinator
- ✓ Hamed Nazim – Assistant Manager Front Office.
- ✓ Mohamed Nasih – Housekeeping & Laundry Manager
- ✓ Martha Omondi – Learning & Development Supervisor
- ✓ Ahmed Rasheed- Chief Stewarding
- ✓ Florian Niesing – DOFB
- ✓ Edouard Laurent Deplus – Executive Chef
- ✓ Martina Zaneta – Front office manager.
- ✓ Charlie Sleddon – MDC Manager

4. Green Team Action Plan

#	Key Performance Areas	Objective	Target	Action Item(s)	Assessment	Responsibilities
1	Greenhouse Gas Emissions	Reduce diesel consumption	<u>3 % reduction with respect to 2023</u> 2023 (Target): Reduce 3% 2022:812,079 KWh 2021:812,0790-KWh	➤ Replacing the old hot water system with the new heat pump to produce the hot water in Staff room. Total 04 Boilers installation completed in kuda huraa staff accommodation block and 4 nos' in bodu huraa staff accommodation scheduled in year 2023, Average electricity saving from one unit is 3.52Kwh per day 28 kwh. Planned to replace all by 2023 and reduce carbon footprint – 83 ton of CO2.		Director of Engineering & Chief Engineer

			2020:634,9612-KWh 2019:866,5180- KWh 2018:848,1178-KWh	➤ Replaced the Public area old ac with new ac in following area, Staff room -30, Tuckshop, resorts shop, Power house, IPTV room, cold kitchen, IBD buffet room, butchery, MDC Tuck shop -2 ac replacing project completed, and kids club, IT server room, guest changing room ac replacing scheduled for 2023.		
2	Energy Efficiency, Conservation and Management	Reduce energy through more efficient light bulbs, Water Heaters and HAVC system	<u>Reduce monthly energy consumption from YTD 2023 by 5%</u> ✓ All CFL and Fluorescent lights to be replaced with LEDs in all the staff room ✓ All Staff room water heaters to be replaced to EVO Heat pumps. ✓ Hotel Energy Portal Sustainability Management system	✓ Planned to replace all CFL lights into LED in all staff room in kuda Huraa, which is going to save 1778 Kwh in a year ($95\text{ W} \times 12 \times 52 \times 30 \times 12 = 1778400\text{ w} / 1000 = 1778\text{Khw}$) project ongoing. ✓ New EVO Heat Pumps to installation work ongoing. ✓ Scheduled the Environment audit by Feb 2023 to get more input and scope for energy, Waste and water saving. ✓ HEP plate form to upload the energy data (Electricity, water LPG & waste) by engineering department on monthly basis and see challenges and opportunities to improvement in consumption and cost.		Director of Engineering & Chief Engineer
3	Management of Fresh Water Resources and Waste Water	Reduce freshwater consumption.	<u>Reduce monthly water consumption from YTD 2023 by 3%</u> 2023 (Target)Reduce: 3% 2022: 1112.07M3 2021: -111,207 m3	✓ Water proofing of water villa pool tiles overflow rectification work ongoing. ✓ Installed the new RO plant which is 250KLD with energy recovery by 40% of water, Having VFD control the speed and help to save the energy.		Director of Engineering

			2020: - 652,66 m3 2019: -858,28 m3 2018: - 856,62 m3	✓ Planned water safety audit by Nalco company to get more area for water conservation in. ✓ Upgrade the RO Plant No: 03 Heat, Energy recovery and VFD by 2023.		
Ecosystem 4 Conservation and Management			✓ <u>MDC Visitors and Marine Education</u> ✓ <u>Reefs capers Coral Reef Restoration</u> ✓ <u>Reefscapers Turtle Rehabilitation</u> ✓ <u>Reefscapers Marine Life ID Database</u>	a. Overhaul our current presentations to make them even more enlightening, and thus inspire guests to care about ocean conservation. b. Work closely with resort management to overhaul our current practices in regards to c. Waste management (Dealing with waste recycling company, and reduce/reuse waste as much as possible) d. Energy production and consumption (carbon footprint) e. Light pollution (namely for turtle hatchling safety) f. Fossil fuel use (boats and jet skis in particular) g. To conduct further research into coral spawning in conjunction with LG on going. h. To continue the mass transplant effort of new corals started in March 2022, and overhaul the sunrise side channel frames (where bleaching has been the worst). i. Continue building more guest-sponsored frames, deploying them in deeper sites and experiment with hardier species. j. Assist resort management with finding a way to give back to other ecosystems (besides reefs) and offset our carbon footprint – our suggestion is planting mangroves (they are a massive carbon sink that directly positively impact reef life) k. New EPA regulations mean we can no longer rear hatchlings; instead, focus on continuing rehab patients and Flying Turtles program.		MDC, Manager

				l. Conduct local beach clean ups and educate locals and guests alike about the dangers of plastic pollution and marine debris m. Integrate our turtle data with the wider global network. n. Integrate our cetacean data with wider Reefscapers network across the Maldives, and investigate potential further cetacean research topics. o. Teach guests how to take Turtle and Dolphin ID photos during excursions and dives, so that they can personally contribute via Citizen Science. p. Conduct more clean-up dives, where the MDC team and Dive team go to surrounding reefs and clean up ghost fishing gear.		
5	Solid waste management	Reduce the practice of disposing food waste and sludge into the ocean.	<u>Reduce monthly energy consumption from YTD 2023 by 5%</u> ✓ <u>Complete stop of throwing food waste into the ocean</u>	✓ Installing the fully automatic compost machine /waste converter machine by End -2023 to manage the kitchen waste. ✓ Having tie up with Maldives Plastic Oscan alliance to collect the plastic water bottles and recycle. (ONGOING)		Director of Engineering
		Reduce & recycle waste destined for landfill	✓ Replace non-degradable packaging where possible. ✓ Recycle the kitchen used oil and lube oil from power generator ✓ Recycle the plastic use in FB	✓ Purchasing: Negotiate with vendors for biodegradable packaging (Ongoing). ✓ Housekeeping: Explore a way to Recycle Soaps (Ongoing) ✓ Employee shop: No plastic bottles, no plastic cup noodles, biodegradable yogurt packaging etc. (Ongoing) ✓ garbage segregation and sending to recycling company (used oil from kitchen, power generator, Metal, cardboard box, glass and plastic.) for recycling. (ongoing) ✓ Replaced all the plastic take away boxes with paper boxes in F&B areas. Almost 20,000 no of plastic take away boxes replaced with		Director of Purchasing / DOF/ DOFB/DOR /DOHK

				biodegradable paper takeaway boxes (Ongoing) ✓ We successfully replaced the plastic lids (of our take away paper coffee cup) to biodegradable lids. (ongoing) ✓ Plastic & glass bottles collecting bins are placed in heart of the house. ✓ Replacing the tooth brush in guest with bamboo stick by first quarter of 2023 going to reduce the landfilling by 6000 number every year. (Ongoing) ✓ Replacing the plastic shaving riser with bamboo stick by first quarter of 2023 and reduce the landfilling by 2000 pieces very year. (Ongoing) ✓ Replacing the existing plastic garbage bags with fabric and washable to save 6000 bags to landfilling every year. (ONGOING)
