

FOUR SEASONS RESORT, JUMEIRAH: WALK THROUGH MAY 2022

Introduction:

Suez Middle East LLC, as part of its comprehensive service of providing waste management and recycling services to Four Seasons and to help improve the landfill diversion ratio as well as improving the year-on-year targets set for the hotel as an entity undergoing DTCM certification, Suez conducted a walk through, within the hotel to benchmark on the improvements as well as to identify gaps in the segregation process.

The below mentioned waste stream was looked at for the aforementioned areas within the hotel:

1. General waste
2. Food waste
3. Recyclable waste

The spot audits were done in the following areas:

- Housekeeping Areas
- F&B areas

The waste collection systems were analyzed with the following summary:

1. Four Seasons has implemented segregation systems in all F & B outlets with provision of recycling bins for kitchens and back of the houses for collection of recyclables.
2. The following points are observed within the process:
 - a. Bins for food waste is placed within the kitchens and outlets that generate food waste
 - b. Glass recycling is practiced diligently with set processes for collection
 - c. Improved segregation is required for the outlets as the bins have mixed material (other than glass)
3. The segregation at housekeeping pantries is followed, however the efficiency of the process needs to be looked at as there is a large volume of recyclables still placed within the general waste bin.
4. As per the observation, the bags filled with mixed material from the housekeeping pantry and placed within the portable compactor.
5. The open skip has a large volume of recyclables placed within the same.
6. It is highly recommended that clear garbage liners be used for collection of waste and recyclables, as this will assist in identification of the proper type of waste and segregation opportunities.

SUMMARY OF THE SPOT AUDIT:

1. HOUSEKEEPING AUDIT:

GOOD POINTS:

1. The housekeeping pantry has bins specified for segregation of recyclables
2. The bins meant for glass bottles are clean with spot contamination of gloves and tissues
3. The bins meant for paper has also slight contamination of other materials.

OPPORTUNITIES FOR IMPROVEMENT:

4. The general waste bins have a large volume of paper bags, cartons and other recyclables that are carried out during clearance.
5. As per the hsk team, the material is segregated at the loading bay. However, after the audit, the bags with general waste was observed within the portable compactor.
6. The cages also had unflattened cardboards

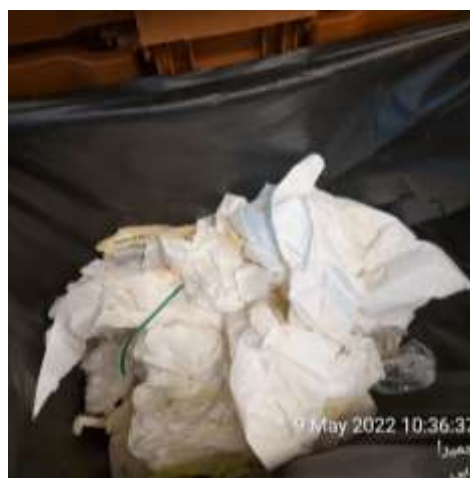

2. F&B & STEWARDING AUDIT:

GOOD POINTS:

1. The kitchens have bins for waste segregation.
2. Spot contaminations are present within the bin and since it has just been implemented, the process will be a gradual implementation
3. Glass segregation process is diligently followed.
4. The waste is a mixture of the following materials:
 - a. Contaminated tissues
 - b. Contaminated plastic packaging
 - c. Metal
 - d. Tetrapacks
 - e. Food waste

OPPORTUNITIES FOR IMPROVEMENT:

1. Segregation system needs to be implemented within all the outlets and bars.
2. There are some areas which need bins for collection of recyclables. Additional information is as per Annex 1.
3. The waste generated within the outlets needs to be source segregated to ensure that all the recyclables collected needs to be placed within the recycling loop, rather than the waste stream
4. The recyclables should be placed in the central recycling cage.
5. The below mentioned option is also recommended.
 - a. Placing a well trained Suez manpower at the loading bay for segregation of dry waste brought out, so that the below materials can be further segregated from dry waste.
 - i. Paper
 - ii. Plastic packaging
 - iii. Plastic
 - iv. Metal
 - v. Tetrapacks

- b. The manpower will need to cover 24 hours or as per the requirement of the hotel.
- c. The segregated recyclables shall be placed in cages for Suez vehicle to collect.

Annex 1:

PROPERTY	EXISTING RESOURCES	RECOMMENDED RECYCLING RESOURCES	REMARK
Banquet Kitchen	Has bins for paper, can, food waste, plastic and general waste	1 X 45 ltr bin for glass	- Glass generated within the kitchen should be segregated. - Segregation should be practiced properly, as contamination is observed - Need training on recycling segregation
Banquet BOH	Waste bins are brought in only during events	1 X 240 ltr for glass 1 X 240 ltr for aluminum cans	To be used only during banquets
Sea Fu Kitchen	Has 2 bins for general waste	1 X 120 ltr for glass 1 X 120 ltr for tin cans	- Tin cans generated within premises to be segregated. - Segregation should be practiced properly, as contamination is observed - Need training on recycling segregation
Sea Fu Dish Wash Area	Has bins for food waste	1 X 45 ltr bin for general waste	- Segregation should be practiced properly, as contamination is observed - Need training on recycling segregation
Sea Fu Café Area	Has bins for paper	1 X 45 ltr bin for general waste	Tissue paper should be placed in general waste
Sea Fu Clearance		1 X 120 ltr bin for plastic	Plastic packaging and other plastic material should be placed for recycling.
Sea Fu Bar	In built bins for waste		Not required as glass is collected separately

Family Pool Bar	2 bins for general waste	1 X 120 ltr for glass 1 X 120 ltr for aluminum cans and plastic	Due to the lack of space, the bins shall be placed inside the barricaded area.
Main Pool Bar	1 bins for general waste	1 X 120 ltr for glass 1 X 120 ltr for aluminum cans 1X 120 ltr for plastic	The 3 bins shall be placed next to the bar in a demarcated area, as per the discussion with the bar manager.
Main Kitchen BOH	Bins present for glass and plastic		No bins needed
Main Kitchen	Bins present for food waste and general waste		No bins needed
IRD Kitchen	Bins present for plastic, food waste and general waste	1 X 120 ltr bin for tin cans	• Segregation should be practiced properly, as contamination is observed • Need training on recycling segregation
Kitchen Pantry (cold kitchen)	Bins present for food waste and general waste	1 X 45 ltr for glass 1 X 45 ltr for aluminum cans 1X 45 ltr for plastic	• Segregation should be practiced properly, as contamination is observed • Need training on recycling segregation
Fish Kitchen	Bins present for general waste	1 X 120 ltr bin for food waste	The plastic waste generated is not accepted by the recyclers and hence should be disposed as general waste.
Butchery Kitchen	Bins present for general waste	1 X 120 ltr bin for food waste	The plastic waste generated is not accepted by the recyclers and hence should be disposed as general waste.
Pastry Kitchen	Bins present for general waste	1 X 3 stream bin for paper, plastic and metal	• Segregation should be practiced properly, as contamination is observed

			• Need training on recycling segregation
Mercury Kitchen	Has bins for food waste	1 X 45 ltr for aluminum cans 1X 45 ltr for plastic	• The existing bin fore paper should be converted to general waste as tissue papers are not recyclable. • Segregation should be practiced properly, as contamination is observed • Need training on recycling segregation
Mercury Bar	Has bins for general waste	1 X 45 ltr for aluminum cans	Glass recycling is present. Training needs to be provided for proper segregation
Hendericks	Bins present for glass, and paper	Bin for aluminum	The bin for paper should be renamed to aluminum cans. No need to purchase new bins
Shai C	Bin for general waste, food waste	Bin for plastic 1X 45 ltr bin for tetrapack	The existing bin for food waste should be converted for plastic, especially for plastic bottles
Shai C Kitchen	1 X 45 ltr bin for general waste	1 X 120 ltr bin for food waste	Convert the existing 45 ltr bin for tin cans
Staff Cafeteria	Bins for paper, plastic and food waste	Need bin for tetrapack, as that is the only recyclable generated	Convert the bin for paper into bin for tetrapack and the plastic bin should be converted to the general waste bin.
Laundry	Bin for general waste	1 X 120 ltr bin for plastic 1 X 120 ltr bin for paper	The bin has a mix of paper and plastic waste that should be segregated and diverted to recycling
